

WE HAVE THE COMPLETE AUTOMATION SOLUTION

Training your way to success

TRAININGS

- **INDUSTRIAL AUTOMATION**
- CONTROL SYSTEM

OUR CAPABILITIES

PROJECTS

DESIGN AND ENGINEERING

SYSTEM INTEGRATION

INSTALLING AND SITE SUPPORT

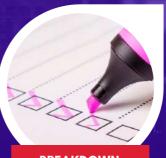

COMMISSIONING

- Requirement generation as per 1 the client specification
- **Design and Document** 2
- 3 **Fabrication and Assembling**
- **Erection and Commissioning**
- **Breakdown and Maintaince**

MANPOWER SUPPLY

BREAKDOWN

MAINTENANCE

AUTOMATION IN INDUSTRIES

PHARMACEUTICAL INDUSTRY

RUBBER INDUSTRY

TEXTILE INDUSTRY

METAL INDUSTRY

BUILDING MANAGEMENT SYSTEM

FOOD & BEVERAGE INDUSTRY

LEATHER INDUSTRY

ELECTRONICS INDUSTRY

AUTOMATION SYSTEM TRAINING

PLC

A Programmable Logic Controller is a type of tiny computer that can receive data through its inputs and send operating instructions through its outputs. Fundamentally, a PLC's job is to control a system's functions using the internal logic programmed into it.

SCADA

SCADA stands for Supervisory Control and Data Acquisition. It is a type of software application program for process control. SCADA is a central control system that consists of controllers network interfaces, input/output, communication equipment, and software.

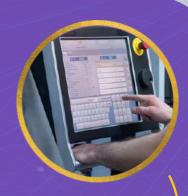

AUTOMATION SYSTEM TRAINING

HMI

HMI stands for Human-Machine Interface and refers to a dashboard that enables a user to communicate with a machine, computer program or system. Technically, you could apply the term HMI to any screen that someone uses to interact with a device, but it's typically used to describe such screens used in industrial settings.

VFD

A Variable Frequency Drive (VFD) is a type of motor controller that drives an electric motor by varying the frequency and voltage of its power supply. The VFD also has the capacity to control rampup and ramp-down of the motor during start or stop, respectively.

SERVO DRIVES

A Servo Drive is a basic element of a motion control system which also includes a servo motor, controller, and feedback element. Servo drives take a command signal for position, velocity or current and adjust the voltage and current applied to the servomotor based on closed-loop feedback.

AUTOMATION SYSTEM TRAINING

SIEMENS

SIMATIC PCS 7 is a highly scalable Process Control System with numerous topologies based on redundancy, optional hardware and software functions. For small systems where engineering or operation tasks are carried out by only one user the single-user architecture of PCS 7 offers a cost-effective solution.

ABB

ABB 800xA have replaced the Electrical SCADA, Electrical Control System, Safety System, PLC HMI, DCS HMIs with one system that creates a seamless plant operation environment. ABB's Extended Automation System 800xA provides the functionality of these systems built-in, this reduces the total cost of ownership and creates and unparalleled plant operation environments.

HMI stands for Human-Machine Interface and refers to a dashboard that enables a user to communicate with a machine, computer program or system. Technically, you could apply the term HMI to any screen that someone uses to interact with a device, but it's typically used to describe such screens used in industrial settings.

Honeywell

A Variable Frequency Drive (VFD) is a type of motor controller that drives an electric motor by varying the frequency and voltage of its power supply. The VFD also has the capacity to control ramp-up and ramp-down of the motor during start or stop, respectively.

DOMESTIC & INTERNATIONAL CLIENTS ON PROJECT INTEGRATION SERVICES

INFERCON has been offering its various services on DCS, SIS, ESD, FGS, PLC, HMI, SCADA, Field Instruments, Wireless Field Instruments, and Process Controls with a team of industry experts of rich experience. The expert team had worked on several projects in the USA, the Middle-East, and the African countries helping several Large Enterprises, System Integrators, EPC's & OEM's, and Process Consultants in the world.

Distributed control systems (DCS) are dedicated systems used in processes that are continuous or batch-oriented.

Processes where a DCS might be used include

Chemical plants

Petrochemical (oil) and refineries

Pulp and paper mills

Nuclear power plants

Environmental control systems

Water management systems

Water treatment plants

Automobile manufacturing

Metallurgical process plants

Pharmaceutical manufacturing

Sugar refining plants

Agriculture applications

Sewage treatment plants

Food and food processing

Agrochemical and fertilizer

Metal and mines

Project Services

- Project Management
- Lead Automation Contractor
- Start-up & Commissioning

Engineered Services

- Front-End Engineering
- Analytical and CEMS
 Engineering
- Engineered Skid Solution
- · Reliability Engineering

Staffing Services

- Project-based Support
- Long-Term Contracting
- Emergency breakdown

OUR CLIENTS

FPSO Kizomba

We provide the customized solution for critical applications to improve the productivity and process optimization by Increasing the production speed and reducing the error parameter with reduction of manpower.

Registered Office

INFERCON AUTOMATION PVT. LTD.

No. 11/8, 13th Street Jai Nagar, Arumbakkam, Chennai - 600106, Tamil Nadu, India.
